COMP0190 Project Preparation Module Presentation

MSc AI4SD and AI4BH Academic Year 2025-2026
COMP0190: Project Presentation
In Person Wednesday 25/03/2026 from 13:00 to 18:00

In-Person Assessment – Project Presentation

Each student will deliver a **5-minute presentation** followed by a **5-minute Q&A session** (10 minutes total per student) where examiners will ask questions related to their project.

Your presentation should be structured as follows:

Presentation Format (5 Slides) -please UCL presentation template-

1. **Slide 1: Title & Supervisor Details**
   This slide should include:
   - Project title
   - Student name
   - Supervisor name(s) & affiliation

2. **Slide 2: Background to the Problem**
   This slide should provide a brief overview of the research area and highlight:
   - Context and significance: Why is this an important problem?
   - Rationale: Why is this study needed?
   - What has been done before? Mention key existing research or gaps.
   - What problem remains unresolved?
   - What are the challenges?
   - Briefly reference one or two key finding from your structured literature review that informed your project positioning.

Concept	Example
Rationale	"Millions lack access to expert radiologists; AI could assist in early lung disease detection." "Urban areas struggle with high energy consumption, and sustainable smart grids can improve efficiency and reduce carbon footprints."

---

3. **Slide 3: Aims & Objectives**
   - Aim: The big-picture goal of the research.
   - Objectives: The specific steps needed to achieve the aim.
   - Hypothesis: A testable statement.
   - Explain how your literature review influenced or refined these aims, objectives, or hypotheses.

Concept	Example
Aim	"To develop an AI-driven tool for diagnosing lung disease from X-ray images." "To develop an AI-powered energy management system for optimizing electricity distribution in smart cities."
Objectives	"1. Review literature on AI in radiology, 2. Collect and preprocess X-ray dataset, 3. Train a CNN model, 4. Evaluate model performance using real-world test data." "1. Analyze energy consumption patterns in urban areas, 2. Develop a predictive model for optimizing electricity distribution, 3. Evaluate the model's impact on energy efficiency."
Hypothesis	"AI models trained on diverse datasets will outperform traditional diagnostic methods by at least 10%." "AI-driven energy optimization will reduce energy waste by at least 15% compared to traditional grid management methods."

4. **Slide 4: How It Will Be Done**
   Students should provide a **concise summary** of their methodology:
   - Data & Sources: Where will the data come from?
   - Methods: What approach will they use?
   - Expected outcomes.
   - Evaluation: How will success be measured?
   - Justify key methodological decisions in light of the reviewed literature.

5. **Slide 5: AI Regulatory Considerations**
   Students will analyse their project against AI regulations and ethical considerations using the UK AI regulatory framework. Regulatory and ethical considerations must be explicitly linked to your specific dataset, model, and application context.
   - **(a)** *Cross-Sectoral Principles:* Using the **five AI regulatory framework principles**, discuss any potential challenges your project may pose in terms of: Safety; Fairness; Transparency; Accountability; Contestability & Redress
   - **(b)** *AI System Classification:* Using the **UK AI regulatory framework's categorisation**, determine whether your work falls into any of these AI system types and explain why.
   - **(c)** *Societal Harm & Misuse Risks:* Does your work pose any risks related to societal harm or misuse (referencing the "Tackling Specific Risks" guidance)? If yes, how could these be mitigated?

COMP0190 Project Preparation Module Presentation

Assessment Process

- Students will be allocated to one of five parallel presentation rooms, each staffed by an academic examiner and a postgraduate teaching assistant.
- Students must present within 5 minutes.
- Presentations exceeding this time may be stopped to ensure fairness across candidates.
- SORA will add +2 minutes to presentation.
- Examiners will ask follow-up questions designed to assess depth of understanding and the ability to justify methodological and evidential decisions.
- Evaluation will be based on clarity, depth of understanding, and regulatory awareness.

Assessment Rubric

Clarity & Structure (**15**/100 Marks)
Understanding of Background & Rationale (**15**/100 Marks)
Methodology Explanation (**20**/100 Marks)
Regulatory Considerations (**20**/100 Marks)
Delivery & Confidence (**10**/100 Marks)
Q&A Response (**20**/100 Marks)
